

METHODS, COMPUTER READABLE MEDIUMS AND SYSTEMS FOR
REQUESTING, RETRIEVING AND DELIVERING METADATA PAGES

ABSTRACT OF THE INVENTION

Methods, computer readable mediums and systems provide media player users with a full contextual metadata experience. Metadata include multiple forms of property data, or information, relating to media accessed by a media player, such as a CD in a CD-ROM drive of a computer. Metadata is transferred from a server to a client.

- 5 Identification parameters associated with the accessed media file are submitted by the client to a server, and property data is retrieved and forwarded to the client. The metadata provides the user with integrated, contemporaneous property data directly related to the media file being played, providing automatic, integrated access to data from multiple databases, simply by accessing a related media file through a media player,
- 10 without further direction from the user.
